

The Golden Thread of a West Port fire doorset

01

Primary Test Evidence

West Port's policy is to only provide fire doorsets with Primary Test Evidence where available. All fire doorsets are put through a rigorous testing and certification process that covers fire, smoke and security. This has created a large back catalogue of Primary Test Evidence allowing every fire doorset to be factory calibrated and certified.

Specification

West Port's experienced team of surveyors, estimators and sales staff can guide our customers through a bespoke specification process ensuring your fire doorsets meet the requirements of your project. Our Primary Test Evidence offers a wide range of door styles to suit all needs.

03

Manufacture

We manufacture FD30, FD60 & Fire Screens using the latest CNC machining processes. These are painted in our state of the art automated paint plant. UKCA approved glass and ironmongery is installed producing a complete precision fire doorset ready to be delivered to any UK location. Every fire doorset is also fitted with a CCS Fire Door Management System data tag as standard, creating your first step to complete compliance.

Installation

West Port work closely with 3rd party accredited Installers throughout the UK offering a quick and efficient installation process that complies with UK GOV regulations. Installation data can be uploaded to the CCS app along with individual door allocation to a specific site address, creating a life cycle of the fire door.

04

05

Inspection

Article 17 of the Regulatory Reform (Fire Safety) Order 2005 states the responsible person must ensure that general fire precautions (which includes fire doors) must be in an efficient working order and in good repair. To accomplish this a routine inspection regime is recommended. West Port supplies a CCS data tag in every door as standard, this is the starting point to your businesses journey to compliance. We recommend the CCS Fire Door Management System is used to conduct your fire door inspections.

Remedial Work

During the life time of a fire door components like closers, door handles, intumescent strips can become damaged and require repair or replacement, door gaps might require adjustment this remedial work keeps a fire door compliant and ready to save lives. West Port's sister company Contactless Check Solutions (CCS) is a simple digital app and dashboard that records the entire life cycle of a fire door to ensure you comply with new and existing Fire Door Regulations. Visit CCS's website www.ccs-fire.com
